

Our Family Cyber Checklist

201 Congratulations!

If you're reading this, you're the Chief Family Security Officer–great job! 🍐

With many devices and accounts per family, keeping track of them all can be tough.

Use the following worksheets to track important devices and accounts, ensuring best security practices are being used and that you've got backups for your most critical and precious info.

For extra help on any of the steps, visit wizer-training.com/workbook

Account Status

·̈́Ġ.

List out your most critical accounts and do a quick healthcheck on your password strength for each.

Account	Owner?	ls This Login Shared?	How Is It Shared?	Is MFA On?	Password Used Elsewhere?
Bank	Mom	Yes	Emailed To Mom	Yes	No

Account Status Con't

·̈́Ġ.

List out your most critical accounts and do a quick healthcheck on your password strength for each.

Account	Owner?	ls This Login Shared?	How Is It Shared?	Is MFA On?	Password Used Elsewhere?
Instagram	Judy	No	N/A	Yes	No

Update Devices & Apps

What Is An Update?

Manufacturers and software providers regularly release updates to issue fixes and improve their systems (aka patching).

Keeping your devices and software updated is important because <u>cyber criminals exploit old vulnerabilities in unpatched systems</u> to attack them.

What Needs Updating?

- Your physical device's operating systems Laptops, Tablets, Mobile Phones
- The apps you download to these devices (Instagram, Bank app, Zelle, Maps, etc)
- Even the internet browser you use! (Chrome, Safari, Mozilla, etc)

The good news is you can turn on automatic updates for many of these.

For those you cannot, it's a good idea to keep track the last time they had a proper update. For a full guide visit wizer-training.com/workbook

Device Check For Updates

Take inventory of your devices and ensure auto-updates are turned on when possible!

Device	Owner?	Auto Updates Turned On?
lpad	Dad	Yes

The Top 5 Reasons To Backup Your Data

Hardware failure - Your computer dies, spills happen or Mother Nature just decides to surprise you with an earthquake, flood, lightning strike, etc.

You made a mistake - You deleted something by accident. Don't worry - it happens to the best of us!

Software issues - You ran an update and it killed your computer (literally).

Ransomware - You got locked out of your data by cyber criminals.

Something is compromised - Criminals hacked you through a different method and compromised your data.

How To Back Up Your Computer?

Did you know that Mac and Windows have free backup software built into the operating system? Here's how to access the free backup software:

On Windows Control Panel > System and Maintenance > Backup and Restore

On Mac System Preferences > Time Machine

Other Tips To Consider

Establish a routine backup schedule like monthly, quarterly or twice a year.

For critical documents, keep physical copies in a fireproof/waterproof safe.

Backups Log

. What data and memories are the most critical for your family were an incident to occur? Back up that info first.

Device / Account	Owner?	Where Is It Backedup?	Date Last Backed Up?
ABC Health Insurance	Dad	External hard drive	January 2024
Taxes	Mom	Mom's Google Drive	October 2024

Backups Log Con't

·̈́Ġ.

Don't forget special photos, birth and marriage certificates, passports, medical records, wills, special projects, etc.

Device / Account	Owner?	Where Is It Backedup?	Date Last Backed Up?
Our Family Genealogy	Dad	Yes	January 2024
